Vision Analysis System Now for Use in General Industry

The EnviroCam™ for Biotechnical, Petrochemical, and Semiconductor Industries is now available for General Industry applications. The EnviroCam vision analysis system provides real time, in situ observation and analysis for local or remote applications. The EnviroCam incorporates rugged high performance cameras and analysis software that operate in high temperatures, high and low pressures, high vacuum and corrosive environments. The EnviroCam provides images, video, analysis, and process control signals based on first order visual observation.

Observation and analysis provided by the EnviroCam is stand alone. In addition, the EnviroCam provides new, unique data that any process control system can use to optimize a process, increase yields, and provide a higher level of quality. Operational environments can be hazardous, general purpose or ultra clean. To date traditional process recording has been through electronic instrumentation. Records provided by the EnviroCam include images, video, raw data, and sophisticated analysis. This unique data gives real time process control new and enhanced capabilities.

Please visit our web site www.envirocam.net for more information or to request a quotation.
